

gen33 metric 1: LLM red-force hardness against the anchored ladder

● Llama 3.3 70B (8 forces) ● Qwen3 27B (8 forces) — doctrine heuristic (the bar) ■ random floor (mean $\pm$ sd) - - - oracle ceiling

Each dot = one generated force (mean best-response damage over field seeds 5100–5102, $\sigma_0 = 8$ km); thick tick = population mean. Bar = beat the heuristic; per model, no pooling.
